The invention concerns the isolation of two new liquefying alpha-amylases (and their coding sequences) from Bacillus sp. strains KSM-K36 and KSM-K36, designated K36 and K38, of which this sequence encodes one. The alpha-amylases of the invention are chelating-agent resistant and thus are useful in the starch, brewing, fibre, pharmaceutical and food industries, and especially as components of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Liquefying alpha-amylase; detergent; starch industry; brewing industry; pharmaceutical industry; food industry; fibre industry; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful in a detergent composition not less than 70 % when treated under

                                                                                                                                                                                                                                                                                                                                                                                                                                          284
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        301
                                                                                                                                                                        The present sequence is the coding sequence of a novel alpha-amylase from Bacillus sp. The invention concerns the isolation of two new liquefying alpha-amylases (and their coding sequences) from Bacillus sp. strains KSW-K36 and KSW-K38, designated K36 and K38, of which this sequence encodes one. The alpha-amylases of the invention are chelating-agent resistant and thus are useful in the starch, brewing, fibre, pharmaceutical and food industries, and especially as components of
                                                                            useful in a detergent composition not less than 70 % when treated under
   χ.

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from 2C Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB29310-B29311) and have improved wash performance in alkaline detergent solutions (pH 9-11) and have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 6.0. The invention also relates to mutants (AAB2918-B2934) of the covel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally convel alpha-amylases active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs are useful in a detergent composition of these narymaes are useful for etchanol production. In particular, the pulp and paper industry, for brewing or baking, or as laundry, especially useful for removing starch possitions. They are especially useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for convenient of the sequence represents DNA encoding a novel Bacillus mature alha-amylases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Alpha-amylase; AAI-6; AAI-10; DSW 12650; DSW 12651; alkaline detergent composition; starch liquefaction; textile desizing; brewing; baking; ethanol production; starch modification; laundry; dishwashing; surface cleaning; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptides having alpha-amylase activity and nucleic acids encoding the enzymes, useful as a detergent or a dish wash detergent composition, for textile desizing, for liquefaction of starch, or for

This DNA sequence may be expressed recombinantly for the production of an alpha-amylase protein. The produced protein is characterized by having a specific activity at least 25% higher than the specific activity of Termamyl at 25-55 deg C and a pH of 8-10. The enzyme can be used in detergent composition for starch liquefaction, the production of lignocellulosic materials, e.g. pulp, paper and cardboard from waste containing starch, for deinking recycled starch-coated, or starch- containing printed paper, to modify compsns. starch liquefaction, textile desizing, starch modification or beer making Alpha-amylase; enzyme; EC-3.2.1.1; detergent; surfactant; textile; Rasmussen MD; CGATTATTATGGCATCCCAAGTGACGGTGTTCCAAGCTACCGTCAACAGA 1156 1157 TCGACCCACTTTTAAAAGCTCGTCAACAATATGCTTATGGTAGACAGCAC 1206 464 431 lySerLysTrpMetTyrValGlyArgGlnAsnAlaGlyGlnThrTrpThr 447 seq_name: /SIDS2/gcgdata/geneseq/genesegn/NA1995.DAT:AAT00777 AspTyrPheAspHisTrpAspValValGlyTrpThrArgGluGlySerSe rSerArgProAsnSerGlyLeuAlaThrIleMetSerAsnGlyProGlyG AspLeuThrGlyAsnAsnGlyAlaSerValThrIleAsnGlyAspGlyTr Outtrup H, Bacillus sp. alkaline alpha-amylase DNA.                                                                                                                                                                                                                                                                                                                                                                                                                                                            have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequence of the parent termanyl-like alpha-amylases T141, K142, F143, D144, F145, P46, G147, R148, G149, G144, R181, G182, D183, G184, K185, A186, W189, S193, N195, H107, K108, G109, D166, W167, D168, G169, S100, R11, Q172, F173, F267, W268, K269, N270, D211, L272, G273, A274, L275, K311, E346, K385, G456, N457, K458, P459, G460, T461, V462, T463. The variants can be used for washing and/or dishwashing. They can also be used in the production of sweeteners and ethanol from starch, accharification processes. The present sequence encodes an amylase that can function as the parent sequence in the production of the
                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes termamyl-like alpha-amylase variants that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GlnAlaAspValGlyTyrGlyAlaTyrAspLeuTyrAspLeuGlyGluPh 67

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes termamyl-like alpha-amylase variants that have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequence of the parent termamyl-like alpha-amylase: T141, K142, F143, D144, F145, P145, G147, R148, G149, Q174, R181, G182, D183, G184, K185, A186, W189, S193, N195, H107, K108, G109, D166, W167, D168, G169, S170, R171, Q172, F173, P267, W268, K269, N270, D271, L272, G273, A274, L275, K311, E346, K385, G456, N457, K458, P459, G460, T461, V462, T463. The variants can be used for washing and/or dishwashing. They can and/or for textile desizing, and in starch liquefaction and/or scanding processes. The present sequence encodes an amylase that can function as the parent sequence in the production of the variants of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Termamyl-like; alpha-amylase; variant; washing; dishwashing; production; sweetener; ethanol; starch; textile desizing; starch liquefaction; saccharification process; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              448
```

```
This sequence represents the coding sequence for a parent sequence used to generate new variants of a Termamyl-like alpha-amylase with alpha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in W09526397, B. stearothermophilus, B. licheniformis, B. myloliquefactions or Bacillus sp. #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing or starch liquefaction (e.g. for production of sweeteners or ethanol).
                                                                                                                                                                                                             for textile
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                306
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      256

```

```
This sequence represents the coding sequence for a parent sequence used to generate new variants of a Termamy!-like alpha-amylase with alpha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in W09526397, B. stearothermophilus, B. licheniformis, B. amyloliquefactions or Bacillus sp. #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing or starch liquefaction (e.g. for production of sweeteners or ethanol).
                                                                                                                                                                                                                                                                                                                                                 Variant; Termamyl; alpha-amylase; mutation; Bacillus; detergent; dishwashing; laundry; textile; desizing; starch liquefaction; sweetener; ethanol; ss.

one tiant of parent termamyl-like alpha amylase useful for washing, tile desizing and starch liquefaction, comprising alterations in more solvent exposed amino acid residues Variant of textile

English Disclosure; Page 66-67; 80pp; The present sequence encodes a parent Termamyl-like alpha-amylase from which mutants with increased stability at acidic pH, low calcium concentration and high temperatures have been derived. The sequence was isolated from a Bacilius genomic DNa library. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall hydrophobicity of the enzyme or the overall number of methyl groups in the side chains of exposed residues may be increased. The mutations can be incorporated by site-directed mutagenesis or by random mutagenesis. As a result of their increased stability, the variants are suitable for the industrial processing of starch, i.e. starch liquefaction and saccharification. They may also be useful for washing dishwashing and textile desizing. Hybrid alpha-amylases alpha-amylases have also been created in order to increase enzyme

```
The present sequence encodes a fusion protein of a Bacillus pectate lyase polypeptide and a JP170 alpha-amylase polypeptide. Pectate alpase is a pectinase which catalyses the random cleavage of alpha-1,4-glycosidic linkages in pectic acid (polygalacturonic acid). The fusion polypeptide is expressed using the cells of the invention. The specification describes a cell for improved production of a fusion protein comprising a native pectate lyase fused to an exogenous polypeptide. The cell is preferably a gram positive cell. The cell is polypeptides, which have been difficult to obtain, such as active human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bacillus cells having a DNA sequence coding for a pectate lyase, a proteolytic cleavage target site, or a polypeptide of exogenous origin fused sequentially into one open reading frame, for producing fusion proteins in higher yields

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Key
```

```
alpha-amylase. Alpha-amylase is an enzyme that acts on starch related polysaccharides, hydrolysing the alpha-1,4-glucoside bond of the polysaccharide molecule. Alkaline liquefying alpha-amylases exhibit resistance to surfactants used in detergents, and decompose starch or starch-related polysaccharides in a highly random manner. The Bacillus species KSM-AP1378, from which this sequence was isolated, is an alkalophilic Bacillus strain. It was isolated from soil in the vicinity of the city of Tochigi. The enzyme is useful in improving the efficiency of dish-washing and laundry detergents, particularly on starch dirts.
                                                                            This sequence represents the coding sequence for an alkaline liquefying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 398
                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a mutant alpha-amylase. Included in the invention are a gene encoding the mutant alpha-amylase, a vector containing the gene, and a transformed cell recombined by the vector. The enzyme is used in a detergent composition. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This DNA sequence may be expressed recombinantly for the production of an alpha-amylase protein. The produced protein is characterized by having a specific activity at least 25% higher than the specific activity of Termanyl at 25-55 deg C and a pH of 8-10. The enzyme activity of Termanyl at 25-55 deg C and a pH of 8-10. The enzyme production of lignocellulosic materials, e.g. pulp, paper and cardboard from waste containing starch, for deinking recycled starch-coated, or starch-coating printed paper, to modify starch for papermaking, for textile desizing, and beer-making
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New alkaline Bacillus alpha-amylase - used in e.g. detergent compsns. starch liquefaction, textile desizing, starch modification

                    The present sequence is a novel alpha-amylase from Bacillus sp. The invention concerns the isolation of two new liquefying alpha-amylases from Bacillus sp. strains KSM-KSB and KSM-KSB, designated KSG and KSB, which this protein is one. The present alpha amylases are chelating-agent resistant and thus are useful in the starch, brewing, fibre, pharmaceutical and food industries, and especially as components of

The present sequence is a novel alpha-amylase from Bacillus sp. The invention concerns the isolation of two new liquefying alpha-amylases from Bacillus sp. strains KSM-K36 and KSM-K38, designated K36 and K38, of which this protein is one. The present alpha-amylases are chelating-agent resistant and thus are useful in the starch, brewing, fibre, pharmaceutical and food industries, and especially as components of
                                                                                                                                                          New liquefying alkaline amylase, useful in a detergent composition comprises a residual activity of not less than 70 % when treated under

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nuclear caides encoding them. The novel alpha-amylases (AAB29311) have improved wash performance in alkaline detergent solutions (PH 9-11) and have a temperature optimum in the range 55-65 degrees (Calsius at pH 9-0.7). The invention also relates to mutents (AAB2918 BAB934) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally according the anglases active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleac acids encoding the appha-amylases of the the invention, and the recombinant production of alpha-amylases of the the invention, in a desizing composition. The alpha-amylases are useful in a detergent composition or a dishwashing or starch, or for ethanol production. In particular, the holp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a ceptergent at alkaline pH. The alpha-amylases are also useful for sequences AAB29311-B29394 represent the mutant Bacillus alpha-amylases
                                alkaline detergent composition; starch liquefaction; textile desizing; brewing; baking; ethanol production; starch modification; laundry; dishwashing; surface cleaning; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polypeptides having alpha-amylase activity and nucleic acids oding the enzymes, useful as a detergent or a dish wash detergent position, for textile desizing, for liquefaction of starch, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The present sequence is not shown in the specification, but is derived from the wild-type Bacillus sp. alpha amylase (AAB29310)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nielsen VS;

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB20310-B29311) have improved wash performance in alkaline detergent solutions (PH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 59.0. The invention also relates to mutants (AAB20318-B29394) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the contructs and host cells comprising nucleic acids encoding the contructs and host cells comprising nucleic acids encoding the these enzymes. The alpha-amylases are useful in a desizing composition of the alpha-amylases are useful for textile desizing, starch modification for alpha-amylases are useful for textile desizing, starch modification in the pulp and paper industry, for brewing or baking, or as laundry, and constability are accepted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              especially useful for removing starchy stains during washing with a detergent at alkaling pure paracelly useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for producing drinking or industrial ethanol from starch or whole grains. Sequences AABS9318-B29330 represent specific embodiments of the mutant Bacillus alpha-amylases of the invention.

Note: The present sequence is not shown in the specification, but is derived from the wild-type Bacillus sp. alpha amylase (AABS9310) shown on page 105-106.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      shown on page 105-106.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      483 AA;

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB29311) have improved wash performance in alkaline detergent solutions (pH 9-11) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9.0. The invention also relates to mutants (AAB29318-B29344) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally acceded to a compasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of alpha-amylases are useful in a detergent composition or a dishwash detergent composition, in a desizing composition or a dishwash detergent composition, in a desizing starch modification in the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are specially useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for secondary stains during washing or industrial ethanol from starch or whole grains. Sequences AAB2931-B29394 represent the mutant Bacillus alpha-amylases

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB29310-B29311) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9.0. The invention also relates to mutants (AAB29318-B29394) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            constructs and host cells comprising nucleic acids anytaxes, expression constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of these enzymes. The alpha-amylases are useful in a detergent composition for liquefaction of starch, or for ethanol production. In particular, the alpha-amylases are useful for textile desizing composition, in the pulp and paper industry, for brewing or baking, starch modification in the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a detergent at allahaline plu. The alpha-amylases are also useful for producing drinking or industrial ethanol from starch or whole grains. Sequences AAB29331-B29394 represent the mutant Bacillus alpha-amylases
                                                                                                                                New polypeptides having alpha-amylase activity and nucleic acids encoding the enzymes, useful as a detergent or a dish wash detergent composition, for textile desizing, for liquefaction of starch, or for ethanol production -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to two novel Bacillus alpha-amylases, AAI-6 from 2C Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and not nucleic acids encoding them. The novel alpha-amylases (AAB29310-B29311) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9.0. The invention also relates to mutants (AAB29318-B29394) of the covel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally constructs and host cels comprising nucleic acids encoding the acidic pH and/or at low Ca2+ concentration. The invention additionally constructs and host cels comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of these enzymes. The alpha-amylases are useful in a detergent composition of the alpha-amylases are useful in a desizing composition. Cor a dishwash detergent composition, in a desizing composition of starch, or for ethanol production. In particular, for late than anylases are useful for textile desizing, starch modification dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a cespecially useful for removing starchy stains during washing with a producting drinking or industrial ethanol from starch or whole grains.
                                                                                                                                                                                                                                                         Alpha-amylase; AAI-6; AAI-10; DSM 12650; DSM 12651; alkaline detergent composition; starch liquefaction; textile desizing; brewing; baking; ethanol production; starch modification; laundry; dishwashing; surface cleaning; mutant; mutein.
New polypeptides having alpha-amylase activity and nucleic acids encoding the enzymes, useful as a detergent or a dish wash detergent composition, for textile desizing, for liquefaction of starch, or for ethanol production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nielsen

                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB29310-B39311) have improved wash performance in alkaline detergent solutions (pH 9-11) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9-0. The invention also relates to mutents (AAB2918-B9394) of the encompasses active fragments of movel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally concentructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of alpha-amylases are useful in a detergent composition, or a dishwash detergent composition, in a desizing composition, correct the alpha-amylases are useful for textile desizing, starch modification in the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are composition and the pulp and paper industry for brewing or baking, or as laundry, conspected at alkaline pH. The alpha-amylases are also useful for removing starchy stains during washing with a ceptergent at alkaline pH. The alpha-amylases are also useful for modification. Consequences AAB29318-B3330 represent specific embodiments of the mutant sequence is not shown in the specification, but the consequence is not shown in the specification, but the consequence is not shown in the specification, and the consequence is not shown in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (ABAB29110-B29311) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9.0. The invention also relates to mutants (ABAB2918-B2934) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of these enzymes. The alpha-amylases are useful in a detergent composition or a dishwash detergent composition, in a desizing composition.
                                                                                                                                                                                                                                                                                                                                                                                                      Alpha-amylase; AAI-6; AAI-10; DSM 12650; DSM 12651; alkaline detergent composition; starch liquefaction; textile desizing; brewing; baking; ethanol production; starch modification; laundry; dishwashing; surface cleaning; mutant; mutein.
                                                                                     New polypeptides having alpha-amylase activity and nucleic acids encoding the enzymes, useful as a detergent or a dish wash detergent composition, for textile desizing, for liquefaction of starch, or for ethanol production -

for liquefaction of starch, or for ethanol production. In particular, the alpha-amylases are useful for textile desizing, starch modification in the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for producing drinking or industrial ethanol from starch or whole grains. Sequences AAB29331-B29394 represent the mutant Bacillus alpha-amylases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Alpha-amylase; AAI-6; AAI-10; DSW 12650; DSW 12651; alkaline detergent composition; starch liquefaction; textile desizing; brewing; baking; ethanol production; starch modification; laundry; dishwashing; surface cleaning; mutant; mutein.

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB23310-B2311) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 5.0. The invention also relates to mutants (AAB23318-B29394) of the covel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of these enzymes. The alpha-amylases are useful in a detergent composition, for a dishwash detergent composition, in a desizing composition. The pulp amylases are useful for textile desizing, starch modification in the pulp and paper industry, for brewing or Daking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a recombing or a taking varied and alpha-amylases are also useful for removing starchy stains during washing viewed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                producing drinking or industrial ethanol from starch or whole grains. Sequences AAB29331-B29394 represent the mutant Bacillus alpha-amylases
                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptides having alpha-amylase activity and nucleic acids encoding the enzymes, useful as a detergent or a dish wash detergent composition, for textile desizing, for liquefaction of starch, or for

```
nucleic acids encoding them. The novel alpha-amylases (AAB29310-B29311)
have improved wash performance in alkaline detergent solutions (pH 9-11)
and have a temperature optimum in the range 55.65 degrees Celsius at pH
condition also relates to mattants (AAB29318-B2934) of the
novel alpha-amylases having increased thermal stability, particularly at
acidic pH and/or at low Ca2+ concentration. The invention additionally
constructs and host calls comprising nucleic acids encoding the
alpha-amylases of the the invention, and the recombinant production of
these enzymes. The alpha-amylases are useful in a detergent composition
or a dishwash detergent composition, in a desizing composition,
for liquefaction of starch, or for ethanol production. In particular,
the alpha-amylases are useful for textile desizing composition,
in the pulp and paper industry, for brewing or baking, or as laundry,
dishwashing or hard surface cleaning detergent compositions. They are
especially useful for removing starchy stains during washing with a
ceptergent at alkaline pH. The alpha-amylases are also useful for
producing drinking or industrial ethanol from starch or whole grains.
Sequences AAB2931-B29394 represent the mutant Bacillus alpha-amylases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        299
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       302

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB23310-B3311) have improved wash performance in alkaline detergent solutions (pH 9-11) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees (Calsius at pH 9-10). The invention also relates to mutants (AAB23318-B29340) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and haramylases are useful in a detergent composition or a dishwashing or bard surface cleaning detergent composition. In particular, the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for sequences AAB2931-B29394 represent the mutant Bacillus alpha-amylases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ï

```
The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB231310-B3311) and have a temperature optimum in the range 55-65 degrees (Esius at pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9-0. The invention also relates to mutants (AAB2318 B29344) of the ovel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Ca2+ concentration. The invention additionally concendases active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells comprising nucleic acids encoding the constructs and host cells composition, in a desizing composition or a dishwash detergent composition, in a desizing composition or a dishwash detergent composition, in a desizing composition or the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for sequences AAB29318-B29394 represent the mutant Bacillus alpha-amylases
                                               polypeptides having alpha-amylase activity and nucleic acids oding the enzymes, useful as a detergent or a dish wash detergent ossition, for textile desizing, for liquefaction of starch, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the invention.
Le: The present sequence is not shown in the specification, but derived from the wild-type Bacillus sp. alpha amylase (AAB29310)
                                                                                                                                                                                   Claim 21; Page -; 112pp; English.

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB23310-B3311) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 5.0. The invention also relates to mutants (AAB29318-B29394) of the covel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Cast concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of these enzymes. The alpha-amylases are useful in a detergent composition, or a dishwash detergent composition, in a desizing composition, or for liquefaction of starch, or for ethanol production. In particular, the alpha-amylases are useful for textile desizing, starch modification in the pulp and paper industry, for brewing or baking, or as laundry, in the pulp and paper industry, for brewing or baking, or as laundry, in the pulp and paper industry, for brewing or baking with a detergent at alkaline pH. The alpha-amylases are also useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for scucing drinking or industrial ethanol from starch or whole grains. Sequences AAB29331-B29394 represent the mutant Bacillus alpha-amylases

The invention relates to two novel Bacillus alpha-amylases, AAI-6 from Bacillus sp. DSM 12650, and AAI-10 from Bacillus sp. DSM 12651, and nucleic acids encoding them. The novel alpha-amylases (AAB29310-B29311) have improved wash performance in alkaline detergent solutions (pH 9-11) and have a temperature optimum in the range 55-65 degrees Celsius at pH 9-0. The invention also relates to mutants (AAB29318-B39344) of the novel alpha-amylases having increased thermal stability, particularly at acidic pH and/or at low Cat-concentration. The invention additionally encompasses active fragments of the novel alpha-amylases, expression constructs and host cells comprising nucleic acids encoding the alpha-amylases of the the invention, and the recombinant production of these enzymes. The alpha-amylases are useful in a detergent composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or a dishwash detergent composition, in a desizing composition, for liquefaction of starch, or for ethanol production. In particular, the alpha-amylases are useful for textile desizing, starch modification in the pulp and paper industry, for brewing or baking, or as laundry, dishwashing or hard surface cleaning detergent compositions. They are especially useful for removing starchy stains during washing with a detergent at alkaline pH. The alpha-amylases are also useful for producing drinking or industrial ethanol from starch or whole grains. Sequences AAB29331-B29394 represent the mutant Bacillus alpha-amylases
                                                                                                                                                                                                                                                                                                                                                                                  New polypeptides having alpha-amylase activity and nucleic acids encoding the enzymes, useful as a detergent or a dish wash detergent composition, for textile desizing, for liquefaction of starch, or for ethanol production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NPINRWQDISGAYIIDAWIGFDFSGRNNAYSDFKWRWFHFNGVDWDQ-RYQENHIFRFAN 179
